To Import a Dictionary into StenoCAT

The standard procedure would be to go into StenoCAT explorer, use the Tools menu and select Copy In/Out.

In the "Copy In/Out" pop-up select dictionaries on the left hand side and under "Copy From" look for the folder the dictionary is located in.

Once the correct folder is selected change "Copy In Types" to RTF/CRE and the dictionary will become listed under the "Select file(s) to copy" column. Highlight the dictionary and click copy files in.

This should work fine for a dictionary that is mostly words. We may need to clean it up and fix some issues with paragraphing and punctuation if there are definitions of that type. You can email Gigatron at help@gsclion.com.
